## CRStar Insights Rhode Island Correction Layout for CRStar

Rhode Island requires that all facilities submit corrections and/or modifications to cases that have previously been exported to the state. In CRStar, these cases are coded as T (Case has been transmitted to State) in the State Report Flag field on the Case Administration screen in the abstract. When any changes are made to a record that has already been transmitted to the state, CRStar automatically changes the T (Transmitted to State) in the State Report Flag field to a C (Correction). This includes all changes and new entries in every data field required by the state.

## Please check with the state on the specific fields required for correction.

Population Label:		STATE CORRECTIONS		•	Hospita	als:	01		~

Each month when submitting new cases to the state, a population of correction cases will need to be selected as well.

- 1. Name the population Label, State Correction, or similar
- 2. Enter a Hospital Number
- 3. Choose abstracted cases only
- 4. Enter Item Number 200 State Report Flag = C
- 5. Click Select

Export State Data								
Population Label:	STATE CORRECTIONS	-						
Filename:	State Export							
Update State Report Flag and Transmit Date								
Run GenEdits after Export								
Export Type:	New 🗹 Corrections							
Start Time:	End Time:							
🚽 Run	👀 New 📑 Exit							

- 6. Go to the Reporting menu, then Data Exports, then State Export
- Choose the previously selected population from the drop down (State Corrections)
- Name the filename according to any naming conventions the state may require

**Note:** The Filename defaults to State Export. Unless the filename is changed, each time the user runs the export, duplicate files will be created, i.e. State Export, State Export (1), State Export (2), etc. If the filename is not renamed here, it can be renamed before submission to the state.

- 9. Check Update State Report Flag and Transmit Date. This will change the C's back to T's.
- 10. Choose Export Type-Corrections
- 11. Click Run

A list of the corrected cases will be generated on screen. The report may be printed.

A txt file will automatically be created and downloaded to the computer.

**Note:** Depending on the browser (and browser version) the file will then either be placed automatically in the download folder, or the user will be given a message box to choose where to download the file.
