## Using Scrolling Field Index Numbers

Designing reports for a population varies according to the data a user wants to retrieve. Custom reports are especially useful for limiting criteria on a previously selected population.

Scrolling fields allow multiple values under one field number. This is necessary to capture all dates, treatments, first or subsequent therapy, and where the treatment was done. Because there are multiple value codes listed under the same field number, this may result in creating a difficult report to decipher.

Here is an example of a report with a scrolling field, using field number 127 (Surgery) in any reports (i.e. list for a Population, Graph for a population) lists all values under the field numbers. This holds true for all scrolling fields.

6	BREAST	TAMEKA	6226502	
9	BREAST	ANGELIA	973053	
10	BREAST	FLOSSIE	618086	

When using a scrolling field, the patient's name is listed several times on the report showing all treatment encounters.

Remember to check the report for scrolling field numbers. Some scrolling fields have a **summary field number**. These fields depict the most definitive procedure or date. When more than one modality is recorded in any treatment grid, the summary fields will display the most definitive codes.

Below is a list of scrolling field numbers in CRStar.
