Enhancements & Corrections
August 28, 2024

Enhancements

- The Report Utility now has a "Clear Search" button to clarify its intended function
- The "Misc Reports" option was removed from the old Reporting menu. All reports are available under the newer Enhanced Reporting menu.
- The following states now have the v24 state export available: **NH, KS, and WA**

Corrections

- A correction has been made to Delete Abstract, Copy Abstract, and Combine Patient screen patient lookup so the cursor does not relocate once placed into a search field
- The list of histology codes has been adjusted so they always display in code order
- Corrections have been made to "Report for File" under the Enhanced Reporting menu to address reports that were not downloading to Excel or that were producing false zero selections
- Labels on the Comparison Reports have been corrected to display date ranges and to work without the limited values filled in
- The Follow-up Letters checkbox option to include expired patients in the request has been corrected
- The BPM audit screen has been adjusted to better reflect standards 5.7 and 5.8

State Specific Updates

- Florida – The Florida Follow-up Export has been corrected to take the alternate accession number field into account if that field has a value and removes any spaces
- Massachusetts – The MCR requested a modified records option to be added. Please read the Insight "Massachusetts New Case & Corrections Submissions" for detailed instructions
- Texas – The export was adjusted to accommodate the requirements around RX Summ – SORS field
