

Cases are selected via the Select a Population function using the State Report Flag field as criteria. New case records that are ready for transmission should have the State Report Flag set to "Y" by the abstractor upon completion. Modified records will have a State Report Flag of "C" (if the data modifications involve fields that trigger a correction record). The "C" flag is assigned automatically by CRStar based on Maryland State Cancer Registry Standards.

To export the data, click on Enhanced Reporting > Data Exports > State Export. Select your population label. The Filename will default to “State Export” and can be modified as needed. For Export Type, select “New” as shown below:

To select modified records for transmission, create a population that selects all cases where the State Report Flag is coded to a “C” as shown below.

To export the data, click on Enhanced Reporting > Data Exports > State Export. Select your population label. The Filename will default to “State Export” and can be modified as needed. For Export Type, select “Corrections” as shown below:

The screenshot shows a web application interface for data export. On the left is a sidebar menu with the following items: DASHBOARD, ABSTRACT MANAGEMENT, FOLLOW UP MANAGEMENT, ENHANCED REPORTING, Select a Population, Canned Reports, Registry Mgmt Reports, and Admin. The 'ENHANCED REPORTING' section is expanded, showing sub-options: State Export (highlighted in green), NCDB/RCRS Export (highlighted in blue), and a third option in a light blue box. The main content area is titled 'State Export' and contains the following fields and options:

- Population Label:** A dropdown menu with 'State Modified Records Transmit' selected.
- Filename:** A text input field containing 'State Export'.
- Options:** Three checkboxes are listed:
 - ☐ Update State Report Flag and Transmit Date
 - ☐ Run GenEdits after Export
 - ☐ Zip Data File
- Export Type:** Two radio buttons are shown:
 - ☐ New
 - ☒ Corrections
